

Software integration

Nash
Tech.

Seamlessly connect multiple systems and applications so that your data flows securely and processes can be automated

Our software integration services enable you to connect your systems, applications and data sources from different environments. They include API integration, middleware implementation, microservices orchestration and enterprise service bus (EBS) solutions.

Siloed systems can cause inefficiencies and slow growth. This is especially the case when organisations cannot access real-time data or are using inaccurate data to make critical decisions.

Work with our integration experts so they get to know your business processes on a deeper level and design integration strategies that futureproof your IT investments and drive operational efficiency.

NashTech software integration services are backed by 24/7 support provided by our global delivery model. We also have pre-built accelerators, DevOps pipelines and delivery frameworks that reduce implementation time and cost by up to 40%.

Solve your software integration challenges

Legacy infrastructure

Integrating modern cloud applications with outdated, rigid legacy systems is technically complex and creates risk.

Security and compliance risks

Poorly integrated systems can expose critical vulnerabilities or result in non-compliance.

Lack of skilled integration talent

Integration projects require niche skill sets across APIs, middleware, security and DevOps.

Siloed systems and data fragmentation

You need a unified integration strategy to gain real-time insights and automate processes end-to-end.

High cost and time overruns

Integration projects frequently run over budget and schedule due to poor planning, tool misalignment and underestimation of complexity. Our reusable accelerators and proven delivery models help de-risk these initiatives from day one.

Case study:

Automating the testing process for UKG

Industry: HR

Ultimate Kronos Group (UKG) is a multinational technology company based in North America providing workforce management and human resource management services. It wanted an automated solution to ensure the vast data moving through its systems was accurate and partnered with NashTech to deploy a plug and play reusable automation framework. This solution allows it to test the streaming data pipelines on production fast and assure data quality.

- **230%** increase in test coverage and faster testing
- **70%** reduction in regression time
- **On-demand** test execution

Create more value from your technology investments with software integration

Pre-built integration accelerators and reusable templates

Speed up the development of common integration use cases such as CRM to ERP and on-premises to cloud while reducing time-to-value and project costs.

Global delivery team with deep integration expertise

Our team combines certified architects, domain specialists and delivery engineers to manage complex integrations from planning to deployment.

API-led integration and microservices-based design

By using a modular approach to software integration, we improve agility, scalability and reusability of components and allow incremental evolution of your technology stack.

End-to-end security and governance framework

We embed security, data privacy and compliance controls into every layer of the integration lifecycle. This directly mitigates security and compliance risks.

Hybrid integration architecture support (cloud, on-premises, legacy)

Our solutions bridge the gap between modern cloud platforms and legacy systems through flexible, scalable architecture.

Enhance security, user experience and operational efficiency

We work closely with your teams to understand your current and future requirements and use our expertise and tools to deliver what you need with a technology ecosystem built to provide results quickly without disruption.

- **Pre-built templates to accelerate time-to-value**
Reduce project timelines and deploy integrated solutions up to 40% faster with our pre-built templates and methodology frameworks.
- **Enhanced user and customer experience**
Integrated software and systems create a unified view of data and processes, allowing for more responsive services and personalised interactions.
- **Increase profitability**
Our modular and hybrid architecture reduces long-term costs and supports business growth without expensive overhauls.
- **Minimise operational and reputational risk**
Our built-in governance and compliance models ensure software integration is secure, audit-ready and aligned with industry regulation.
- **Seamless data flow for operational efficiency**
Eliminate manual handoffs and automate cross-platform data exchange to enhance productivity and reduce human error.

Your trusted software integration partner

With expertise in software engineering, quality assurance, API integration, artificial intelligence (AI), cloud architecture, data management and analytics, our team ensures your software is innovative, reliable and strategically aligned with your objectives.

- **Flexible and scalable resourcing models.**
Meet your strategic and technology goals efficiently and drive revenue and profitability.
- **Project delivery that balances innovation and risk.** Solve your toughest challenges through collaborative relationships and processes.
- **AI ready for substantial productivity gains.**
Full AI options for the software development lifecycle (SDLC).
- **Exceptional quality assured.** We measure and continuously improve in terms of the overall quality accreditations we hold, the quality management system we deploy and at a detailed level within the SDLC.
