

Data management

Nash
Tech.

Put the data generated by your organisation to work for your teams, informing decisions and generating revenue

NashTech data management services and solutions enable you to turn your fragmented data into actionable insights and eliminate operational silos from across your organisation.

We offer data modelling, ingestion, storage, governance, organisation, optimisation and monitoring. These capabilities enable you to create a single source of truth from data stored in different systems and locations and avoid the

risks associated with making decisions using outdated or inconsistent data.

Real-time access to a single data set enables you to drive efficiency across your business and lay the groundworks for technologies like artificial intelligence (AI). It can also provide you with a strategic edge when used for processes like customer service because you can accurately predict demand and offer highly personalised experiences.

A data disconnect between teams and processes can hinder productivity and waste resources

Scalability

Our cloud data management solutions can be scaled up or down and avoid further investment in on-premises infrastructure.

Security and compliance

Comply with data protection laws such as GDPR and HIPAA. Our data governance solutions ensure your data is accurate, accessible and secure.

Accessibility

Ensuring your teams have access to the right data – and at the right time – is essential to driving efficiency.

Data silos

Data isolated across different systems can lead to mistakes and missed opportunities. Quality data in a unified system enables teams to collaborate and drive efficiency.

Bottlenecks

Manual data retrieval and processing can take days or even weeks. Eliminates delays with a fully integrated and automated data ingestion and unified data platform.

Case study:

iPoint modernises to process data at scale

Industry: Technology

Software services provider and consultancy iPoint operates in 11 countries. It was struggling with outdated technology and legacy systems that were expensive to maintain. It partnered with NashTech to develop an intuitive platform built on a Microsoft technology stack that collects and processes large volumes of data from different sources and multiple formats.

- **3 months** to build the core framework
- **6 months** to deliver first release with single sign-on and tenant, access and identity management
- **Large data volumes** collected and processed using intuitive platform

Ensure your data is consistent, accurate and secure

Unified data platform

Integrate data from different sources into a single platform to gain a better understanding of your business including potential bottlenecks and nascent opportunities.

Advanced security

Enhance security with measures including least privilege access, role-based access control and multi-factor authentication. These ensure your organisation stays secure and compliant.

Scalable infrastructure

Scale up or down according to your business needs to help better manage infrastructure and keep costs down.

High performance

Stay in control and obtain maximum business value from your data with the ability to optimise data storage, integration and retrieval processes.

Role-based access control

Only authorised users can access sensitive data like customers' payment details. This strengthens internal security and adds an extra layer of protection against potential third-party threats.

Become a data-driven organisation

Businesses today want to be data-driven but good data management is essential if your organisation is to truly achieve this goal. Our data management solutions provide your organisation with everything it needs to enhance security, data quality and accessibility.

Increased productivity

With a unified view of your data, teams from across your business can access up-to-date information to scope out areas for improvement and opportunities.

User experience

Enable your teams and partners to access the information they need without friction, enhance the customer experience with personalisation teams and partners improve collaboration.

Profitability

Make smarter, more profitable business decisions. By eliminating bottlenecks and inefficiencies you can also cut costs to widen your margins.

Faster speed-to-market

Bring products to market faster and launch campaigns quickly. Our data management solutions make it easier to collect and process data, giving you that all important competitive edge.

Risk mitigation

NashTech is ISO27001 accredited. We offer advanced security measures such as access control and multi-factor authentication to mitigate risks such as breaches and non-compliance.

Your trusted data management partner

With expertise in software engineering, quality assurance, API integration, artificial intelligence (AI), cloud architecture, data management and analytics, our team will provide you with differentiated and innovative approaches to fulfilling your business, reporting and data requirements in a cost-effective and resource-efficient way.

- **Flexible and scalable resourcing models.** Gain access to the right skills, experience and capabilities in a flexible and scalable model while reducing costs.
- **Project delivery that balances innovation and risk mitigation.** Solve your toughest challenges through collaborative relationships based on a shared vision and values.
- **Accelerate time to value.** Pre-built architectures for the rapid build and deployment of data lake, data mesh and cloud-based data management solutions.
- **Exceptional quality assured.** We measure and continuously improve in terms of the overall quality accreditations we hold and the quality management system we deploy to assure a flawless delivery.
