

Sustainability reporting solutions

Nash
Tech.

Drive effective sustainability strategies, strengthen regulatory compliance and build trust

Sustainability reporting solutions enable the systematic collection, transformation and presentation of data by organisations about the impact of their activities on people and the environment. This helps investors, public sector organisations, clients and other stakeholders evaluate their sustainability performance and is mandated by regulations such as the EU Corporate Sustainability Reporting Directive (CSRD).

Our Tech Advisory team provides a Sustainability Reporting Workshop to enhance your understanding and support your

reporting objectives. We also build end-to-end sustainability reporting capabilities based on commercial off-the-shelf software (COTS) or a custom software platform to meet both general and industry-specific requirements.

With continued pressure to be more sustainable, reduce environmental impact, meet regulatory requirements and align with consumer expectations, deploying a robust and flexible reporting solution can help your organisation enhance transparency, build trust and support informed decision-making.

Reduce cost and complexity of sustainability reporting

Data disconnect

If your data is fragmented across multiple internal systems and third-party sources, the extraction, transformation and loading (ETL) process is complex and resource intensive.

Complexity and change

Integrating sustainability into existing operations can be a daunting task, requiring adjustments to workflows, supply chains and even corporate culture.

Cost concerns

Implementing sustainable practices can require a significant upfront investment in new technologies, processes and training. This may strain budgets and raise concerns about achieving ROI.

Market demand

You may doubt whether your customers truly value sustainability and might also be questioning whether it will translate into increased sales or loyalty.

Resource constraints

If you are a smaller organisation, you may lack the resources, both financial and human, to effectively implement and maintain sustainability policies.

Case study:

Robust integrations ensure compliance throughout the product lifecycle

Industry: Software and services

iPoint is a global software and services provider that specialises in helping companies manage product compliance, environmental impacts and sustainability performance throughout the product lifecycle. It partnered with NashTech to manage client data through robust integrations that efficiently collate information from diverse sources. Our dedicated data specialist teams transform raw data into formats tailored to support iPoint's applications seamlessly.

- **Compliance** with evolving regulatory standards
- **Rapid innovation** for solutions allowing customers to track, analyse and report on material compliance and sustainability data

Sustainability reporting solution delivering sustainable advantage

Cost effective and reliable

The NashTech reporting accelerator provides a robust, pre-tested platform that comes equipped with essential reporting knowledge, repeatable solutions and automation.

Customise to your unique needs

We offer flexible software solutions to meet your specific sustainability reporting needs, providing customised reports or software using standard delivery models.

Agile engineering

We use our extensive data analytics and reporting experience to improve delivery and reduce costs, leveraging our reusable assets and efficient delivery process.

Turnkey deployments

Our reporting accelerator offers an end-to-end environment on either Microsoft or AWS. We automate deployment, deliver customised data services and provide a pre-built data model.

Model deployment and reporting framework

Dramatically reduce deployment complexities and accelerate the creation of a reporting-ready solution with a pre-built platform that incorporates a standardised reporting framework, robust data models and seamless standard integrations.

Turn sustainability data into an asset by driving greater efficiency and reducing costs

Effective sustainability reporting can influence the overall health of your organisation. Implementing a robust and flexible reporting solution can help your organisation capture many potential benefits beyond ensuring regulatory compliance by driving improvements in operational efficiency.

- **Cost effective and scalable**
Our delivery model accelerates implementation by automating significant portions of the deployment process. This not only speeds up the rollout but also cuts ongoing costs.
- **Rapid deployment**
NashTech sustainability reporting solutions minimise the need for extensive in-house development, enabling you to deploy a reliable and cost-effective platform quickly.
- **Custom development**
If developing custom code is a requirement, our Agile development teams can develop the applications needed.
- **Flexible data insights**
Enable accurate, real-time tracking of environmental, social and governance metrics. You can identify trends, reduce risks and improve transparency for your stakeholders.
- **Ongoing model development**
Sustainability reporting is evolving. NashTech has a program of ongoing model development that benefits all our clients by ensuring long-term compliance and transparency.

The NashTech difference

When you work with us, you are partnering with advisors who:

- **Provide practical explorations of the 'art of the possible'.** Acting as a trusted sounding board for your ideas.
- **Go beyond technical recommendations.** Connecting technology decisions to business results.
- **Help you manage complex stakeholder expectations.** Translating technical needs into language the board understands to ensure buy-in.
- **Challenge conventional wisdom.** Offering honest feedback when standard approaches are not right for you.
